

ProteinFind® Anti-Thy-1/CD90 Mouse Monoclonal Antibody

Please read the manual carefully before use.

Cat. No. HS903

Storage: PBS (pH7.4), 0.02% Sodium Azide, 50% Glycerol; at -20°C for two years, avoid repeated freeze-thawing.

Description

Thy-1/CD90 is a GPI-anchored, developmentally regulated cell surface glycoprotein. It is involved in cell adhesion and cell communication of many cell types, especially in immune and nervous system cells. Thy-1/CD90 is widely used as a marker for hematopoietic stem cells [1]. Decreased expression of Thy1/CD90 mRNA and protein has been associated with the development of epithelial ovarian cancer, suggesting it may have a potential role of human ovarian cancer tumor suppressor genes [2]. Thy1/CD90 knockout mice have been shown to have impaired skin immune response and abnormal retinal development [3]. Thy1/CD90 is epigenetic regulated or dysregulated in some disease states such as pulmonary fibrosis, and the potentially reversible hypermethylation of the Thy1/CD90 promoter may provide new treatment options for this disease [4].

Species Reactivity: Human (the results of species reactivity were determined according to WB experiment).

Clone Number: Trans-12E8

Antibody Isotype: Mouse IgG1

Immunogen

- Human CD90 extracellular region sequence (Gln20-Cys130)
- Entrez Gene ID: 7070
- UniProt ID: P04216

Applicable Experiments and Dilution

- WB: 1:500-1:2000 dilution is recommended.

Positive Control Cell Line: MSC

★ **Advanced Validation:** The antibody was validated by the relative expression of protein levels in different cell lines.

WB: ProteinFind® Anti-CD90 Mouse Monoclonal Antibody for detection of CD90 protein expression in MSC cells.

Dilution ratio of primary antibody: 1:1000

Predicted molecular weight: 25 kDa

Actual molecular weight: 30 kDa

WB: ProteinFind® Anti-CD90 Mouse Monoclonal Antibody was used to detect the expression of CD90 protein in MSC (positive cells), HeLa (negative cells) and K-562 (negative cells).

Dilution ratio of primary antibody: 1:500

Predicted molecular weight: 25 kDa

Actual molecular weight: 30 kDa
